UZH Innovation Grants

The **UZH Innovation Grants** are an early-stage funding support for research-based innovations at the University of Zurich.

The purpose of the UZH Innovation Grants program is to bring research-based ideas with a strong innovation potential off the ground and sharpen projects for further funding and implementation. Projects selected for an UZH Innovation Grant will receive CHF 10'000, coaching and access to the UZH innovation community.

The funds can be used to validate a product idea, sharpen the plan for implementation and prepare for fundraising. Specifically, the UZH Innovation Grant may fund activities such as market analyses, user testing, impact assessment and the development of prototypes.

You can find more information about UZH Innovation Grants on our homepage:
